FRIGORIFICO COMBI

MANUAL DE INSTRUCCIONES

MODELO: CBME176550NFEW

CBME176550NFEX

Por favor, lea este manual de usuario antes del uso por primera vez. Incluye información importante con respecto a la instalación, operación y mantenimiento. Un uso inadecuado del dispositivo puede provocar situaciones de peligro, especialmente para los niños. Conserve este manual para futuras consultas.

INFORMACIONES INHERENTES AL MEDIOAMBIENTE

Este aparato se ha marcado de acuerdo con la Directiva Europea 2002/96/CE referente a la eliminación de los Desperdicios de Aparatos Eléctricos y Electrónicos

(RAEE). El símbolo del cajón tachado que consta en el aparato indica que el producto al final de su vida útil no se debe tratar como basura doméstica normal, sino que se debe llevar a los centros de recogida diferenciada de desperdicios eléctricos y electrotécnicos o bien entregar al revendedor en el momento de comprar un nuevo aparato de tipo equivalente. La adecuada recogida diferenciada de este aparato contribuye a evitar posibles repercusiones negativas para el ambiente o la salud de las personas, que podrían producirse a causa de un incorrecto tratamiento de este producto. La eliminación debe hacerse respetando los reglamentos medioambientales locales vigentes. Para informaciones más detalladas inherentes al tratamiento, la eliminación o el reciclado de este producto, rogamos contacten el servicio local de eliminación de desechos o a la tienda en que compró el aparato. No tirar el embalaje del aparato a la basura sino seleccionar los diversos materiales como poliestireno, cartón, bolsas de plástico, etc. De acuerdo con las normas locales sobre la eliminación de basuras y las normas vigentes. Este aparato carece de HFC (el circuito refrigerante contiene R600a -ISOBUTANO.)

R600a (ISOBUTANO)

El isobutano es un gas natural que no tiene repercusiones para el medioambiente pero es inflamable. Resulta por lo tanto indispensable, antes de conectar el aparato a la red de alimentación, asegurarse de que no esté dañado ninguno de los tubos del circuito refrigerante. Cada 8 gr. de refrigerante, el sitio donde se instala debe contar con un volumen mínimo de 1 m3. La cantidad de refrigerante consta en la tarjeta de datos técnicos situada en la parte posterior del aparato. En caso de pérdida del refrigerante, evitar que llamas libres o fuentes de encendido se encuentren en proximidad del punto de fuga.

PRECAUCIONES PARA SU SEGURIDAD

En este párrafo se indican las principales precauciones a tomar para su seguridad. Leerlas atentamente y respetar cuanto indicado antes de utilizar el aparato.

- Conservar siempre el manual de instrucciones y en caso de vender el aparato, entregarlo al nuevo propietario.
- El aparato debe usarse exclusivamente para congelar alimentos en casa.
- Este aparato está destinado a un uso no comercial.
- En caso de emergencia, desconectar el aparato inmediatamente.
- Comprobar que el cable de corriente no está dañado.
- Se aconseja no utilizar prolongaciones ni enchufes múltiples para conectarlo a la red de alimentación.
- No tocar ni manejar nunca el aparato con los pies descalzos ni con manos o pies mojados.
- Antes de llevar a cabo cualquier operación de limpieza o mantenimiento, desenchufar el aparato o apagar el interruptor principal de la red de alimentación.
- Para desconectar el aparato de la red de alimentación hay que quitar el enchufe de la toma. No tirar del cable de alimentación de esta última.
- No meter en la sección de baja temperatura botellas o contenedores de cristal, porque podrían agrietarse o romperse cuando el contenido se congela.
- Cualquier mantenimiento, incluido la eventual substitución del cable de alimentación debe ser efectuado por el servicio de asistencia técnica o por personal cualificado. De lo contrario, el usuario puede correr serio peligro.
- Los elementos del embalaje como bolsas de plástico, poliestireno o bandas plásticas no deben dejarse al alcance de los niños puesto que son fuente potencial de peligro.
- No permitir que los niños jueguen con el aparato. Por ejemplo si se sientan en las cestas, se columpien o se agarran a la tapa, el congelador podría volcarse o bien podrían caer los objetos colocados encima de él.

- No usar como estribo o apoyo los zócalos, los cajones, las puertas o las rejillas
- Prestar atención para no causar daños a las tuberías del circuito de enfriamiento mientras se coloca, instala o limpia.
- Este dispositivo no debe ser utilizado por niños o personas con capacidades físicas, sensoriales o mentales, o falta de experiencia y conocimiento, a menos que sean supervisados o guiados.
- Los recipientes con gases o líquidos inflamables pueden escaparse a temperaturas ambiente frías. Riesgo de explosión. No almacene materiales combustibles, tales como latas de aerosol.
- Comprobar que en proximidad de las aberturas de ventilación no se hayan instalado aparatos o componentes eléctricos. (p. ej. ventiladores, interruptores, enchufes, etc.).
- Despues de instalar el aparato asegurarse de que no esté apoyado en el cable de alimentación.
- No obstruir las aberturas/rejillas de ventilación previstas en el aparato.
- Evitar llamas o chispas dentro del aparato.
- Al descongelar el aparato no utilizar nunca objetos metálicos para acelerar el proceso. El incumplimiento de dicha advertencia podría causar daños irreparables al circuito refrigerante.
- No usar en su interior aparatos eléctricos (p.ej. máquina de hacer helado o de desodorización, etc.).

Este aparato puede ser utilizado por niños a partir de 8 años y más y personas con capacidades físicas, sensorio mentales reducidas o falta de experiencia y conocimiento si se les ha dado supervisión o instrucciones sobre el uso del aparato de una manera segura y entender los peligros involucrados.Los niños no deberán jugar con el aparato.Los niños no deberán realizar la limpieza y el mantenimiento sin supervisión.

Este aparato frigorífico no está destinado a ser utilizado como aparato incorporado.

INSTALACIÓN

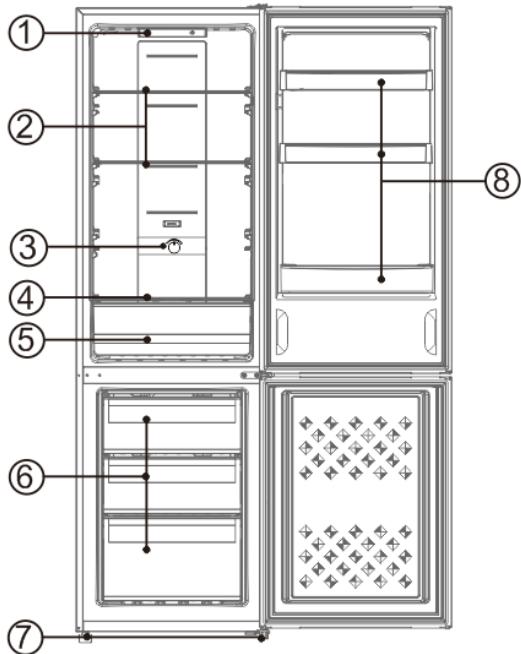

- El aparato debe ser colocado en un lugar bien ventilado y seco. El aparato debe instalarse en una superficie estable y plana, regulando los pies de nivelación, No debe usarse al aire libre y no debe permanecer bajo la lluvia.
- La temperatura ambiental repercute fuertemente en el consumo de corriente eléctrica, por lo tanto el aparato no debe estar expuesto directamente a los rayos solares, tampoco al lado de fuentes de calor como radiadores, estufas, ...
- Ventilación suficiente alrededor del dispositivo es necesario para que el calor se disipe correctamente y para garantizar el funcionamiento con bajo consumo de energía.
- Una vez desembalado el producto, limpiar con un trapo húmedo.
- Aconsejamos esperar por lo menos cuatro horas antes de conectar el aparato para que el aceite del circuito refrigerante tenga el tiempo necesario para ser perfectamente eficiente.
- Antes de colocar comida , esperar 24 horas desde que el aparato haya sido conectado a la corriente.
- No consumir alimentos cuya fecha de conservación esté caducada puesto que podrían ser causa de intoxicación.
- No almacene materiales inflamables,gases o líquidos tales como sprays....

La capacidad neta del congelador (litros) ha sido testado sin los cajones del congelador.

Rangoclimático	Temperatura ambiente
SN	from +10°C to +32°C
N	from +16°C to +32°C
ST	from +16°C to +38°C
T	from +16°C to +43°C

Nota: Cuando se opera en un entorno distinto del tipo de clima especificado (Más allá del rango nominal de temperatura ambiente), el aparato puede no ser capaz de mantener las temperaturas de compartimiento deseables.

INTRODUCCIÓN

No	Descripción
1	Panel control
2	Estantesfrigorifico
3	Perilla de control de temperatura
4	Tapa verdulero
5.1	Compartimento enfriador
5.2	Verdulero
6	Cajonescongelador
7	Patasajustables
8	Estantebotellero

Debido a la innovación tecnológica, las descripciones del producto en este manual pueden no ser completamente iguales con su producto.

La forma de utilizar la caja de hielo

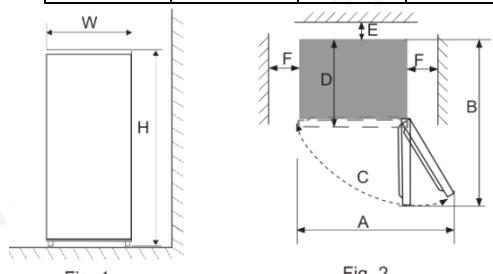

Coloque la caja de hielo en la parte superior del congelador para que se hiele lo antes posible

Medidasaconsejables de ventilación

300 mm por encima
100 mm lateral
50 mm posterior

Dimensiones producto mm

W	D	H	A	B	C(°)	E	F
540	576	1800	845	1095	125±5	50	100

INICIO

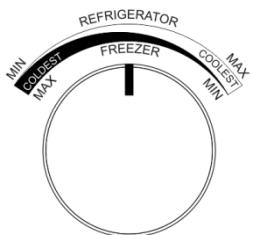

Ajuste de temperatura

La temperatura se puede ajustar presionando la tecla 'SET', y si no se opera la tecla dentro de los 3 segundos posteriores al ajuste de temperatura, dicho ajuste será validado, con la temperatura controlada inmediatamente según el ajuste; y la luz indicadora de modo se apagará después de 3 segundos

Los modos de temperatura tienen un ciclo de la siguiente manera: “5 → 4 → 3 → 2 → 1 → ENFRIAMIENTO RÁPIDO → 5”

COLDEST  COLD	5	Si se necesita temperatura muy baja
	4	
	3	Uso normal
	2	Si no se necesita temperatura muy baja.
	1	
	RECOMMEND	

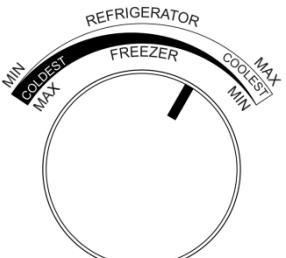

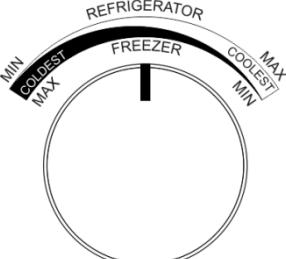

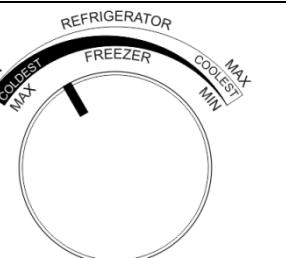

Cuando el modo de temperatura se mantiene sin cambios, ajuste la varilla reguladora de aire de izquierda a derecha, la temperatura del refrigerador disminuye mientras aumenta la temperatura del congelador.

Cuando el modo de temperatura se mantiene sin cambios, ajuste la varilla reguladora de aire de derecha a izquierda, la temperatura del refrigerador aumenta mientras que la temperatura del congelador disminuye.

Se recomienda ajustar la varilla reguladora de aire en la posición media. Cuando el usuario necesite una temperatura del congelador más baja, ajuste correctamente la varilla reguladora de aire hacia la izquierda, luego la temperatura del congelador disminuye mientras la temperatura del refrigerador aumenta. Cuando la temperatura cumpla con el requisito, vuelva a ajustar la varilla de regulación de aire a la posición media de manera oportuna.

El termostato del frigorífico y la varilla de regulación del aire deben utilizarse en combinación.

Ejemplo relación modo display – regulación temperatura

ambiente	Modo recomendado	Regulación recomendada	Notas
Mas que 35°C			
16°C-35°C			1) se recomienda el modo en posición media 2) se recomiendoaponer modo 5 y regulador MAX
Menorque 16°C			

Uso del compartimento de alimentos frescos (si el producto lleva)

Fije la temperatura del compartimento de almacenamiento de alimentos frescos entre 2 °C ~ 8 °C y almacene los alimentos que estén destinados a un almacenamiento a cortoplazo o para comer en cualquier momento en el compartimento de alimentos frescos.

Estante del frigorífico: al retirar el estante, levántelo primero y luego sáquelo; y cuando instale el estante, colóquelo en su posición antes de dejarlo. Mantenga el rebordetraserodelestantehaciaarribaparaevitarque los alimentos entren en contacto con la pared del revestimiento. Al sacar o colocar el estante, sosténgalo firmemente y manéjelo con cuidado para evitar daños.

Caja para verduras: saque la caja para verduras para acceder a los alimentos. Después de usar o limpiar la placa de cubierta de la caja para verduras, asegúrese de volver a colocarla en la caja para verduras, de modo que la temperatura interna de la caja no sea afectada.

Uso de la varilla reguladora de humedad para verduras

La varilla reguladora de humedad de la caja para verduras está diseñada para mantener la humedad y la frescura de las verduras almacenadas en el interior. Cuando la varilla reguladora de la humedad se desliza hacia la derecha, con más agujeros expuestos, se mantendrá menor humedad dentro de la caja para verduras. La varilla reguladora de humedad se desliza hacia la izquierda, con menos orificios expuestos, la humedad más alta se mantendrá dentro de la caja para verduras.

USO

Consejos – uso correcto frigorífico

Cuidado extra con alimentos no cocinados

No mezclar comida preparada con comida no cocinada. Mantenga la comida en estantes distintos y a ser posible cubrir con film.

Espacio alrededor comida

Esto permite que el aire circule dentro del aparato, asegurando que el frío llegue a todo el interior.

Envolver los alimentos!

Para que cada alimento mantenga su olor y sabor, deben ser envueltos en diferentes compartimentos cerrados.

Alimentos Pre-cocinados – Mantener fríos.

Alimentos pre-cocinados deben estar fríos antes de colocarlos dentro de la nevera o congelador.

CERRAR LA PUERTA!

Para prevenir que el frío se escape, intentar no abrir continuamente la puerta.

Consejos – uso correcto congelador

Su congelador es 4 estrellas

Usted será capaz de almacenar cada elemento de los alimentos congelados durante el periodo mostrado en la calificación de 4 estrellas. Este suele ser el período indicado como "Mejor, antes de", que se encuentra en la parte frontal del envase..

Elija cuidadosamente los paquetes

Asegúrese de que el paquete de comida congelada está en perfectas condiciones.

Almacene los alimentos de inmediato

No compre alimentos congelados a menos que usted puede congelar inmediatamente. Bolsas aislantes especiales se pueden comprar en la mayoría de los supermercados. Éstos mantienen fríos los alimentos congelados durante más tiempo.

NOTA: Use alimentos de calidad y manejar lo menos posible. Congele los alimentos en pequeñas cantidades, se congela más rápido, tarda menos tiempo para descongelar y le permite comer en la cantidad que usted necesita

Deja los alimentos cocinados que se enfrié completamente

Enfríe los alimentos en un refrigerador antes de la congelación, si es posible.

Considere cómo desea cocinar el alimento antes de congelarlo.

No congele los alimentos en recipientes de metal.

Utilice bolsas de congelación especiales, envases de plástico, papel de aluminio..

No utilice papel film delgado o vidrio.

Deje una pequeña cantidad de "espacio" al congelar líquidos, para permitir la expansión

DESCONGELACIÓN

Este aparato está diseñado con función de descongelación automática, por lo que no es necesario descongelarlo manualmente.

Tipo de lámpara :LED.

Nivel de eficiencia energética: N/A

Limpieza del interior de la nevera / congelador

Después de la descongelación se debe limpiar la nevera / congelador internamente con una solución diluida de bicarbonato de soda. Luego enjuague con agua tibia con una esponja o paño húmedo y seque. Lave los cajones en agua tibia y jabón y asegúrese de que estén completamente secos antes de volver a colocarlo en la nevera / congelador.

Limpieza del exterior de la nevera / congelador

Use detergente no abrasivo estándar diluida en agua tibia para limpiar el exterior Nevera / Congelador. No use limpiadores abrasivos, estropajos ni disolventes para limpiar cualquier parte de la nevera / congelador

SOLUCIÓN DE PROBLEMAS Y MANTENIMIENTO

No funciona

-El aparato no está correctamente conectado a la corriente eléctrica..

Demasiado frío o demasiado calor

-El termostato no está en la posición correcta.

Aparece condensación en el exterior del aparato.

-Puede ser debido a un cambio en la temperatura de la habitación. Si el problema continua, póngase en contacto con un técnico cualificado.

Ruido

-Comprobar que el aparato está nivelado y que no está en contacto con la pared.

No enfriá

-La puerta se ha quedado abierta demasiado tiempo.

-Hay demasiada comida en el frigorífico

-La temperatura no está correctamente regulada.

NOTA: los siguientes síntomas no son fallos del frigorífico:

-El refrigerante circulando por los tubos hacen un ligero ruido

-El compressor se calienta en verano durante la operación de congelación

*Si su aparato ofrece otros síntomas no descritos anteriormente, debe llamar a un técnico cualificado.

Reparaciones

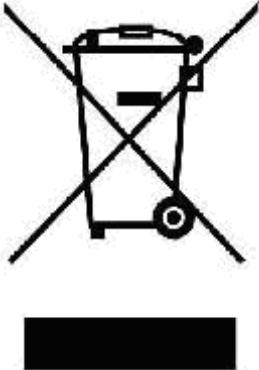

Este producto debe ser reparado por un técnico.

Bajo ninguna circunstancia debe intentar reparar el aparato usted mismo.

Las reparaciones efectuadas por personas inexpertas pueden causar daños o desperfectos graves.

Póngase en contacto con la tienda local donde se realizó la compra.

Cuando el aparato no esté en uso durante largos períodos de tiempo, desconecte de la red eléctrica, vacíe todos los alimentos y limpie el aparato, dejando la puerta entreabierta para evitar olores desagradables.

	<p>Este aparato está diseñado y fabricado con materiales y componentes de alta calidad, que pueden ser reciclados y reutilizados.</p> <p>Este símbolo significa que el equipo eléctrico y electrónico, No se debe desechar con el resto de residuos domésticos.</p> <p>Por favor, deposite su Viejo electrodoméstico en el punto de recogida de residuos o contacte con su administrador local.</p> <p>En la Unión Europea existen sistemas de recogida específicos para residuos de aparatos eléctricos y electrónicos.</p>
---	--

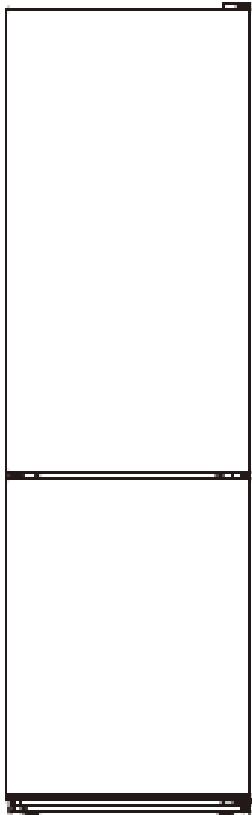

Guerra para la eliminación

El refrigerador el material espumado de ciclopentano utilizado para el refrigerador es inflamable. Por lo tanto, cuando se desguace el refrigerador, debe mantenerse alejado de cualquier fuente de fuego y ser recuperado por una compañía especial de recuperación con la calificación correspondiente que no sea ser eliminado por combustión, a fin de evitar daños al medio ambiente o cualquier otro daño.

Cuando se desguace el refrigerador, desmonte las puertas y retire la junta de la puerta y los estantes; Ponga las puertas y los estantes en un lugar adecuado, a fin de evitar la captura de cualquier niño.

Benavent

REFRIGERATOR-FREEZER

INSTRUCTION MANUAL
MODELO: CBME176550NFEW
CBME176550NFEX

SAFETY

WARNING!

It is hazardous for anyone other than authorized service personnel to carry out servicing or repairs which involves the removal of covers. To avoid the risk of an electric shock do not attempt to repair this appliance yourself.

WARNING!

Risk of fire / flammable materials.

Safety tips

Do not use electrical appliances such as a hair dryer or heater to defrost your Fridge/Freezer.

Containers with flammable gases or liquids can leak at low temperatures.

Do not store any containers with flammable materials, such as spray cans, fire extinguisher refill cartridges etc. in the Fridge/Freezer.

Do not place carbonated or fizzy drinks in the Freezer compartment. Ice lollies can cause "Frost/Freeze burns". If consumed straight from the Fridge/Freezer.

Do not remove items from the Fridge/Freezer compartment if your hands are damp/wet, as this could cause skin abrasions or "Frost/Freeze burns". Bottles and cans must not be placed in the Freezer compartment as they can burst when the contents freeze.

Manufacturer's recommended storage times should be adhered to. Refer to relevant instructions.

Do not allow children to tamper with the controls or play with the Fridge/Freezer. The Fridge/Freezer is heavy. Care should be taken when moving it. It is dangerous to alter the specification or attempt to modify this product in any way.

Do not store inflammable gases or liquids inside your Fridge/Freezer.

If the power cable is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children shall not play with the appliance. Cleaning and user maintenance shall not be made by children without supervision.

This refrigerating appliance is not intended to be used as a built-in appliance.

This appliance is intended to be used in household and similar applications such as

- staff kitchen areas in shops, offices and other working environments;
- farm houses and by clients in hotels, motels and other residential type environments;
- bed and breakfast type environments;
- catering and similar non-retail applications.

Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.

Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

Do not damage the refrigerant circuit.

Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of type recommended by the manufacturer.

Do not store explosive substances such as aerosol cans with a flammable propellant inthis appliance.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.

- WARNING: Keep ventilation openings, in the appliance enclosure or in the built-in structure, clear of obstruction.

- WARNING: Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

- WARNING: Do not damage the refrigerant circuit.

- WARNING: Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.

- WARNING: Refrigerating appliances – in particular a refrigerator-freezer Type I – might not operate consistently (possibility of defrosting of contents or temperature becoming too warm in the frozen food compartment) when sited for an extended period of time below the cold end of the range of temperatures for which the refrigerating appliance is designed;

- WARNING: The necessity that, for doors or lids fitted with locks and keys, the keys be kept out of the reach of children and not in the vicinity of the refrigerating appliance, in order to prevent children from being locked inside.

- WARNING: The refrigerant used in your appliance and insulation materials requires special disposal procedures.

- WARNING: When positioning the appliance, ensure the supply cord is not trapped or damaged.

- WARNING: Do not locate multiple portable socket-outlets or portable power supplies at the rear of the appliance.

Children aged from 3 to 8 years are allowed to load and unload refrigerating appliances.

To avoid contamination of food, please respect the following instructions:

– Opening the door for long periods can cause a significant increase of the temperature in the compartments of the appliance.

–Clean regularly surfaces that can come in contact with food and accessible drainage systems.

–Clean water tanks if they have not been used for 48 h; flush the water system connected to a water supply if water has not been drawn for 5 days.

– Store raw meat and fish in suitable containers in the refrigerator, so that it is not in contact with or drip onto other food.

– Two-star frozen-food compartments are suitable for storing pre-frozen food, storing or making ice-cream and making ice cubes.

– One-, two- and three-star compartments are not suitable for the freezing of fresh food.

–If the refrigerating appliance is left empty for long periods, switch off, defrost, clean, dry, and leave the door open to prevent mould developing within the appliance.

Electrical Connection

⚠WARNING⚠

The power cord of this appliance is equipped with a plug which mates with the standard wall outlets to minimize the possibility of electrical shock.

Under any circumstances, ensure that the power cord is grounded.

This refrigerator appliance requires a standard **220-240VAC ~/ 50Hz** electrical outlet with grounding.

This refrigerator appliance is not designed to be used with an inverter.

The cord should be secured behind the appliance and not left exposed or dangling to prevent accidental injury.

Never unplug the refrigerator by pulling the power cord. Always grip the plug firmly and pull straight out from the receptacle.

Do not use an extension cord with this appliance. If the power cord is too short, have a qualified electrician or service technician install an outlet near the appliance. Use of an extension cord can negatively affect the performance of the unit. Improper use of the grounded plug can result in the risk of electrical shock. If the power cord is damaged, have it replaced by an authorized service center.

Climate Range

The information about the climate range of the appliance is provided on the rating plate. It indicates at which ambient temperature (that is, room temperature, in which the appliance is working) the operation of the appliance is optimal (proper).

Climate range	Permissible ambient temperature
SN	from +10°C to +32°C
N	from +16°C to +32°C
ST	from +16°C to +38°C
T	from +16°C to +43°C

Note: Given the limit values of the ambient temperature range for the climate classes for which the refrigerating appliance is designed and the fact that the internal temperatures could be affected by such factors as location of the refrigerating appliance, ambient temperature and the frequency of door opening, the setting of any temperature control device might have to be varied to allow for these factors, if appropriate.

Note: When operating in an environment other than the specified climate type (i.e., beyond the rated ambient temperature range), the appliance may not be able to maintain the desirable compartment temperatures.

Locks

If your Refrigerator is fitted with a lock, keep the key out of reach and not in the vicinity of the appliance to prevent children being entrapped. When disposing of an old Refrigerator, break off any old locks or latches as a safeguard.

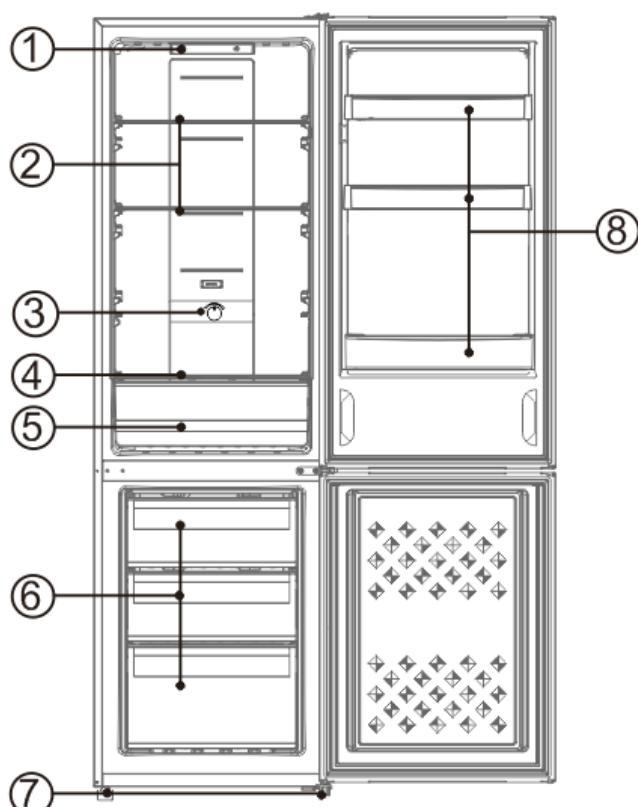

Freon-free

The freon-free refrigerant (R600a) and the foaming insulation material (cyclopentane) that is environmentally friendly are used for the refrigerator, causing no damage to the ozone layer and having a very small impact on the global warming. R600a is flammable, and sealed in a refrigeration system, without leakage during normal use. But, in case of refrigerant leakage due to the refrigerant circuit being damaged, be sure to keep the appliance away from open flames and open the windows for ventilation as quickly as possible.

Product Features

- Total no frost design
- Multi air-flow cooling system
- Electronic temperature control
- Interior LED lighting

Parts name:

No	Description
1	Operation panel
2	Fridge glass shelves
3	Temperature control knob
4	Crisper cover
5	Crisper
6	Freezer drawers
7	Leveling feet
8	Bottle racks

Due to technological innovations, the product descriptions in this manual may not be completely consistent with your refrigerator. Detailed information is in accordance with the final product.

Preparations for use

Installation location:

1. Ventilation condition

The position you select for the refrigerator installation should be well-ventilated and has less hot air. Do not locate the refrigerator near a heat source such as cooker, boiler, and avoid it from direct sunlight, thus guaranteeing the refrigeration effect while saving energy consumption. Do not locate the refrigerator in the damp place, so as to prevent the refrigerator from rusting and leaking electricity.

The result of the refrigerant charge amount of the refrigerator being divided by the total space of the room in which the refrigerator is installed shall be less than 8g / m³.

Note: The amount of refrigerant charged for the refrigerator can be found on the nameplate.

2. Heat dissipation space

When working, the refrigerator gives off heat to surroundings. Therefore, at least 30mm of free space should be spared at the top side, more than 100mm on both sides, and above 50mm at the back side of the refrigerator.

Dimensions in mm:

W	D	H	A	B	C(°)	E	F
540	576	1800	845	1095	125±5	50	100

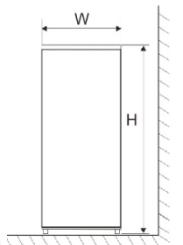

Fig. 1

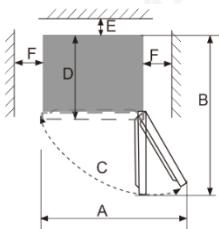

Fig. 2

Note: Figure 1, Figure 2 only illustrate the space demand of the product.

3. Level ground

Place the refrigerator on the solid and flat ground (floor) to keep it stable, or else, it will give rise to vibration and noise. When the refrigerator is placed on such flooring materials as carpet, straw mat, polyvinyl chloride, the solid backing plates should be applied underneath the refrigerator, so as to prevent color change due to heat dissipation.

Unobstructed ventilation shall be maintained around the appliance or in an embedded structure.

Preparations for use

1. Standing time

After the refrigerator is properly installed and well cleaned, do not switch it on immediately. Make sure to energize the refrigerator after more than 1 hour's standing, so as to ensure its normal operation.

2. Cleaning

Confirm the accessory parts inside the refrigerator and wipe the inside with a soft cloth.

3. Power-on

Insert the plug into the solid socket to start the compressor. After 1 hour, open the refrigerator door, if the temperature inside the refrigerator compartment drops obviously, it indicates the refrigeration system is working normally.

4. Storage of food

After the refrigerator runs for a period of time, the internal temperature of the refrigerator will be automatically controlled according to the user's temperature setting. After the refrigerator is fully cooled, put in foods, which usually need 2~3 hours to be fully cooled. In summer, when the temperature is high, it takes more than 4 hours for the foods to be fully cooled (Try to open the refrigerator door as less as possible before the internal temperature cools down).

If the refrigerator is installed in the moisture place, make sure to check whether the ground wire and leakage circuit breaker are normal. If vibration noises are produced due to the refrigerator contacting the wall or if the wall gets blackened by air convection around the compressor, move the refrigerator away from the wall. Setting up the refrigerator may cause jamming noise or image chaos to the mobile phone, fixed-line telephone, radio receiver, television surrounding it, so try to keep the refrigerator as far away as possible in such case.

Functions

1. Functions

When the refrigerator system is powered on for the first time, all icons on the display panel gets illuminated for 2s.

1.1 Temperature setting

Temperature can be adjusted by pressing the 'SET' key. Every time when the "SET" key is pressed, the current mode indicator lights off while the next mode indicator lights up, with the said mode setting validated if no key operation within 5s (or else, the mode setting will be invalid). After the setting takes effect, temperature will be immediately controlled as per the mode setting.

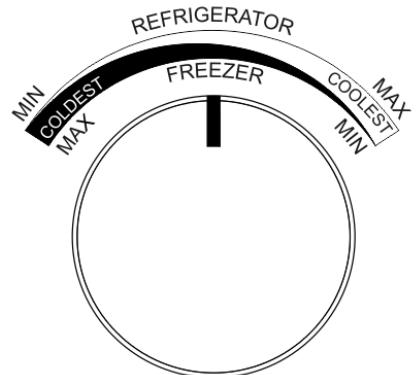

The temperature modes cycle as following: "5→4→3→2→1→FAST COOL→5"

 COLDEST COLD	5	When the user needs a colder temperature.
	4	
	3	When in normal use.
	2	
	1	When the user does not need a colder temperature.

The Freezing temperature control

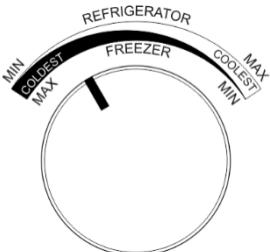

Freezer temperature control

- The freezer temperatures are controlled by the knob switch (as illustrated on the right) in the following manner:
- When the temperature mode keeps unchanged, turn the temperature control knob switch clockwise, then the refrigerator temperature decreases while the freezer temperature gets increased.
- When the temperature mode keeps unchanged, turn the temperature control knob switch anticlockwise, then the refrigerator temperature increases while the freezer temperature gets decreased.
- It is recommended to adjust the temperature control knob switch to the middle position. When you need a lower freezer temperature, turn the temperature control knob switch properly in the anticlockwise direction to decrease the freezer temperature (note that the refrigerator temperature will increase concurrently). When the temperature satisfies the need, be sure to turn the control knob switch back to the middle position in a timely manner.

The fridge thermostat and the temperature control knob should be used in combination.

Temperature adjustment			
Use environment	Recommended panel mode	Recommended knob switch positions	Tips
Higher than 35°C			1) It is recommended to set at the middle mode. 2) The temperature mode can be adjusted as recommended in the left table in case of change to the ambient temperature around the refrigerator.
16°C-35°C			

Lower than 16°C			
--------------------	---	--	--

- When the ambient temperature around the refrigerator is higher than 35 °C, do not set the thermostat at Mode 5 and adjust the temperature control knob to the leftmost position, so as not to affect the normal refrigeration of the refrigerator.
- Do not set the thermostat at Mode 5 and adjust the temperature control knob to the rightmost position, in order to avoid the fridge compartment undercooling.
- If the fridge temperature is not cool or undercooled, set the thermostat at the middle mode and adjust the temperature control knob in the middle position.
- In case the 'Fast cool' function is enabled, adjust the temperature control knob to the middle position.

1.2 "FAST COOL"

Cooling down the temperature in a rapid manner is beneficial to the prevention of food nutrition against lost and the preservation of freshness.

After a cumulative running period of **26 hours**, the fast cooling function will exit automatically, with the temperature mode restored to that set before the fast cooling function is enabled.

1.3 Door open alarm

If the fridge door is open for more than 3 minutes, buzzer alarms will be continuously issued, which can be stopped when the set key is pressed, but will be restored after 3 minutes if the door keeps open. The alarms will not be lifted until the door is closed.

1.4 Power cut memory

In case of power failure, the refrigerator will maintain the operating state before power failure when power supply is restored.

1.5 Power-on delay

In order to protect the refrigerator compressor from being damaged in the case of short-time power failure (i.e., less than 5 minutes), the compressor will not be started immediately after it is powered on.

1.6 Fault alarm

When the indicator light of Mode 5 or Mode3 or Mode 1 keeps flashing, it indicates fault with the refrigerator. Please contact the aftersales person for visiting service in such case.

Instructions for food storage

Precautions for use

- The appliance might not operate consistently (there is possibility of defrosting or temperature becoming too warm in the frozen food compartment) when sited for an extended period of time below the cold limit of the temperature range for which the refrigerating appliance is designed
- The information of climate type of the appliance is provided on the rating plate.
- The internal temperature could be affected by such factors as the location of refrigerating appliance, ambient temperature, and frequency of door open, etc., and if appropriate, a warning that setting of any temperature control device might have to be varied to allow for these factors should be made.
- Effervescent drinks should not be stored in the freezer compartment or the low-temperature compartment, and some products such as water ices should not be consumed too cold.

Food storage location

Due to the cold air circulation in the refrigerator, the temperature of each area in the refrigerator is different, so different kinds of food should be placed in different areas.

The fresh food compartment is suitable for the storage of such foods as need not to be frozen, the cooked food, beer, eggs, some condiments that need cold preservation, milk, fruit juice, etc. The crisper box is suitable for the preservation of vegetables, fruits, etc.

The freezer compartment is suitable for the storage of ice cream, frozen food and the foods to be preserved for a long time.

Use of the fresh food compartment

Fridge shelf: When removing the shelf, lift it up first, and then pull it out; and when installing the shelf, place it into position before putting it down. Keep the shelf rear flange upward, to prevent foods from contact the liner wall. When taking out or putting in the shelf, hold it firmly, and handle with care to avoid damage.

Crisper box: Pull out the crisper box for access to food. After using or cleaning the cover plate of the crisper box, be sure to put it back onto the crisper, so that the internal temperature of the crisper box will

not be affected.

Use of the crisper humidity regulating rod

The humidity regulating rod of the crisper box is design to maintain the humidity and freshness of the vegetables stored inside. When the humidity regulating rod is slide to the right, with more holes exposed, lower humidity will be kept inside the crisper box. When the humidity regulating rod is slide to the left, with less holes exposed, higher humidity will be kept inside the crisper box.

Cautions for food storage

You'd better clean the foods and wipe them dry before storing them inside the refrigerator. Before foods are put in the refrigerator, it is advisable to seal them up, so as to prevent water evaporation to keep fresh fruits and vegetables on one hand, and prevent taint of odor on the other hand.

Do not put too many or too heavy foods inside the refrigerator. Keep enough space between foods; if too close, the cold air flow will be blocked, thus affecting the refrigeration effect. Do not store excessive or overweight foods, to avoid the shelf from being crushed. When storing the foods, keep a distance away from the inner wall; and do not place the water-rich foods too close to the fridge rear wall, lest they get frozen on the inner wall.

Categorized storage of foods:

Foods should be stored by category, with the foods you eat every day placed in front of the shelf, so that the door open duration can be shortened and food spoilage due to expiration can be avoided.

Energy-saving tips: Allow the hot food cool down to the room temperature before putting it in the refrigerator. Put the frozen food in the fresh food compartment to thaw, using the low temperature of the frozen food to cool the fresh food, thus saving energy.

Storage of fruits and vegetables

In the case of refrigerating appliances with chill compartment, a statement to the effect that some types of fresh vegetables and fruits are sensitive to cold and therefore are not suitable for storage in this kind of compartment should be made.

Use of the frozen food storage compartment

The freezer temperature is controlled below -18 °C, and it is advisable to store the food for long-term preservation in the freezer compartment, but the storage duration indicated on the food packaging should be adhered to.

The freezer drawers are used to store food that needs to be frozen. Fish and meat of large block size should be cut into small pieces and packed into fresh-keeping bags before they are evenly distributed inside the freezer drawers.

★ Allow the hot foods to cool down to the room temperature before putting them in the freezer compartment.

★ Do not put a glass container with liquid or the canned liquid that is sealed in the freezer compartment, so as to avoid burst due to volume expansion after the liquid gets frozen up.

★ Divide the food into appropriately small portions

★ You'd better pack the food up before freezing it, and the packing bag used should be dry, in case the packing bags are frozen together. Foods should be packed or covered by such suitable materials as are firm, tasteless, impervious to air and water, non-toxic and pollution-free, to avoid cross-contamination and transfer of odor.

Tips for shopping the frozen foods

1. When you are buying frozen food, look at the Storage Guidelines on the packaging. You will be able to store each item of frozen food for the period shown against the star rating. This is usually the period stated as "Best to use them before x", found on the front of the packaging.

2. Check the temperature of the frozen food cabinet in the shop where you buy the frozen foods.

3. Make sure the frozen food package is in perfect condition.

4. Always buy frozen products last on your shopping trip or visit to the supermarket.

5. Try to keep frozen food together whilst shopping and on the journey home, as this will help to keep the food cooler.

6. Don't buy frozen food unless you can freeze it straight away. Special insulated bags can be bought from most supermarkets and hardware shops. These keep the frozen foods cold longer.

7. For some foods, thawing before cooking is unnecessary. Vegetables and pasta can be added directly to boiling water or steam cooked. Frozen sauces and soups can be put into a saucepan and heated gently until thawed.

8. Use quality food and handle it as little as possible. When foods are frozen in small quantities, it will take less than for them to freeze up and thaw.

9. Estimate the amount of foods to be frozen up. When freezing large amounts of fresh food, adjust the temperature control knob to the low mode, with the freezer temperature lowered. So, foods can be frozen up in fast manner, with the food freshness well kept.

Tips for special needs

Moving the refrigerator/freezer

• Location

Do not place your refrigerator/freezer near a heat source, e.g. cooker, boiler or radiator. Avoid it from direct sunlight in out-buildings or sun lounges.

• Leveling

Make sure to level your refrigerator/freezer using the front leveling feet. If not level, the refrigerator/freezer door gasket sealing performance will be affected, or even it may lead to the operating failure of your refrigerator/freezer.

After locating the refrigerator/freezer in position, wait for 4 hours before using it, so as to allow the refrigerant to settle.

• Installation

Do not cover or block the vents or grilles of your appliance.

When you are out for a long time

- If the appliance will not be used for several months, turn it off first, and then unplug the plug from the wall outlet.
- Take out all foods.
- Clean and dry the interior thoroughly. To prevent odor and mold growth, leave the door ajar: block it open or have the door removed if necessary.
- Keep the cleaned appliance in a dry, ventilated place and away from the heat source, place the appliance smoothly, and do not place heavy objects on top of it.
- The unit should not be accessible to child's play.

Maintenance and cleaning

 **! Before cleaning, unplug the power plug first; Do not plug in or plug out the plug with wet hand, because there is a risk of electric shock and injury. Do not spill water directly on the refrigerator, to avoid rust, electricity leakage and accidents. Do not stretch your hands into the bottom of the refrigerator, since you might be scratched by sharp metal corners.**

Internal cleaning and external cleaning

The food residuals in the refrigerator are liable to produce bad odor, so the refrigerator must be cleaned regularly. The fresh food compartment is usually cleaned once a month.

Remove all shelves, crisper box, bottle racks, cover board, and drawers etc., and clean them with a soft towel or sponge dipped in warm water or neutral detergent.

Clear off the dusts accumulated on the rear panel and side plates of the refrigerator often.

After using detergent, be sure to rinse it with clean water, and then wipe it dry.

 **! Do not use bristle brush, steel wire brush, detergent, soap powder, alkaline detergent, benzene, gasoline, acid, hot water and other corrosive or soluble items to cleanse the cabinet surface, door gasket, plastic decorative parts, etc., so as to avoid damage.**

Carefully wipe dry the door gasket, clean the groove using a wooden chopstick wrapped with cotton string. After the cleaning, fix the four corners of the door gasket first, and then embed it segment by segment into the door groove.

Interruption of power supply or failure of the refrigerating system

- Take care of the frozen foods in the event of an extended non-running of the refrigerating appliance (such as interruption of power supply or failure of the refrigerating system).
- Try to open the refrigerator door as less as possible, in this way can food safely and freshly kept for hours even in hot summer.
- If you get the power outage notice in advance:

- 1) Adjust the thermostat knob to the high mode an hour in advance, so that foods get fully frozen (Do not store new food during this time!). Restore the temperature mode to the original setting when power supply becomes normal in a timely manner.
- 2) You can also make ice with a watertight container, and put it in the upper part of the freezer, so as to extend the time for fresh food to be stored.

 **! Note: Once the refrigerator is used, you'd better use it continuously; and under normal circumstance, do not stop its use, so as not to affect the service life.**

Defrosting

This appliance is designed with automatic defrosting function, thus no need to defrost it manually.

Changing the lamp

The LED lamp is used by the refrigerator for lighting, which features low energy consumption and long service life. In case of any abnormality, please contact the after-sales personnel for visiting service.

Lamp type: LED light.

Energy efficiency level: N/A

Safety-check after maintenance

Is the power cord broken or damaged?

Is the power plug firmly inserted into the socket?

Is the power plug abnormally overheated?

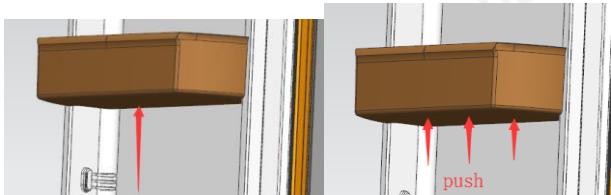

Note: Electric shock and fire accident may be caused in case the power cord and plugs are damaged or stained by dust. If any abnormality, please unplug the power plug and get in contact with the vendor.

How to disassemble the parts

Fridge door bottle rack:

Hold the bottle rack with both hands, and then push it up.

Fridge shelf:

Hold one end of the shelf to lift it up, and meantime pull it outward, in this way can the shelf be taken out.

Simple fault analysis and elimination

With regard to the following small faults, not every failure needs to be fixed by the technical service personnel; you can try to solve the problem.

Case	Inspection	Solutions
• Completely non-refrigeration	<ul style="list-style-type: none">• Is power plug off?• Are breakers and fuses broken?• No electricity or line trip?• Where is the refrigerator installed? Is it placed in balconies, garages, storage rooms and other places where the ambient temperature is below 10 °C?	<ul style="list-style-type: none">• Re-plug• Opening the door and checking whether the lamp is lit.• Power outage or line tripping?• Install refrigerator in a location that is protected and the ambient temperature is above 10 °C. If your refrigerator is installed in too low temperature, the internal cooling system may not work correctly.
• Abnormal noise	<ul style="list-style-type: none">• Is refrigerator stable?• Does refrigerator reach the wall?	<ul style="list-style-type: none">• Adjusting refrigerator's adjustable feet.• Off the wall.
• Poor refrigerating efficiency	<ul style="list-style-type: none">• Do you put hot food or too much food?• Do you open the door frequently?• Do you clip food bag to the seal of door?• Direct sunlight or near a furnace or stove?• Is it well-ventilated?• Temperature setting in too high?	<ul style="list-style-type: none">• Putting food into refrigerator when hot food becomes cool.• Checking and closing the door.• Removing the refrigerator from the heat source.• Emptying the distance to maintain good ventilation.• Setting to the appropriate temperature.
• Peculiar smell in refrigerator	<ul style="list-style-type: none">• Any spoiled food?• Do you need to clean refrigerator?• Do you pack food of strong flavors?	<ul style="list-style-type: none">• Throwing away spoiled food.• Cleaning refrigerator.• Packing food of strong flavors.
• LED lamp always flashing	<ul style="list-style-type: none">• Is the door open for more than 10 minutes?	<ul style="list-style-type: none">• Close the fridge door, open it again in 2s, checking whether the LED lamp restores to normal.

Note: If the above descriptions are inapplicable to troubleshooting, do not disassemble and repair it yourself. Repairs carried out by inexperienced persons may cause injury or serious malfunctioning. Contact the local store where your purchase was made. This product should be serviced by an authorized engineer and only genuine spare parts should be used.

When the appliance is not in use for long periods, disconnect from the electricity supply, empty all foods and clean the appliance, leaving the door ajar to prevent unpleasant smells.

Certifications

Electrical information

This electrical appliance must be grounded.

This product is equipped with a plug, which is suitable for all houses equipped with sockets meeting the current specifications

If the fitted plug is not suitable for your socket outlets, it should be cut off and carefully disposed of. To avoid a possible shock hazard, do not insert the discarded plug into a socket.

This product complies the EEC directives.

Warnings for disposal

- ※ Refrigerant and cyclopentane foaming material used for the refrigerator are flammable. Therefore, when the refrigerator is scrapped, it shall be kept away from any fire source and be recovered by a special recovering company with corresponding qualification other than be disposed by combustion, so as to prevent damage to the environment or any other harm.
- ※ When the refrigerator is scrapped, disassemble the doors, and remove gasket of door and shelves; put the doors and shelves in a proper place, so as to prevent trapping of any child.

Safe recovery instructions

Disposal

Old appliances still have some surplus value. An environmentally friendly approach will ensure that valuable raw materials are recycled.

The refrigerants used in your equipment and insulation materials require special handling procedures. Make sure there is no pipe damage on the back of the equipment before handling.

Up-to-date information on the options for disposing of old equipment and packaging from old equipment can be obtained from the local municipal office.

Correct Disposal of this product

This marking indicates that this product should not be disposed with other household wastes throughout the EU. To prevent possible harm to the environment or human health from uncontrolled waste disposal, recycle it responsibly to promote the sustainable reuse of material resources. To return your used device, please use the return and collection systems or contact the retailer where the product was purchased. They can take this product for environmentally safe recycling.
